

# In betweenies

**Skill to be learnt:** To read and write numbers from 0-20 and beyond. Use knowledge of place value (number size) to put numbers on a number line.

**What you will need:** 0 – 20 number cards

**How to play:** Shuffle cards and place in a pile, face down. Player A turns over 3 cards and puts them in order. Player B turns over 1 card and if it can be placed between any of player A's cards they score a point. Swap. The first player to 5 points wins.

**Talk points:** If your child needs support to order the numbers talk about which numbers are missing. You may recite the numbers in order together. You could use a number line to help find the correct order of the numbers selected. Again try and use language such as bigger, smaller, more, less when talking about the numbers.

**Extension of this game:** Increase the numbers on the cards to include larger numbers.
